

ARCTIC 4 Light HDPE Rescue boat

The A4 Light HDPE Boat for SAR and oil spill recovery. This is a new Arctic Boats model specially developed for the Finnish Fire Rescue Brigades. The 4-meter boat is so light, it can be carried around by 4 people. It is equipped with a 20 hp engine.

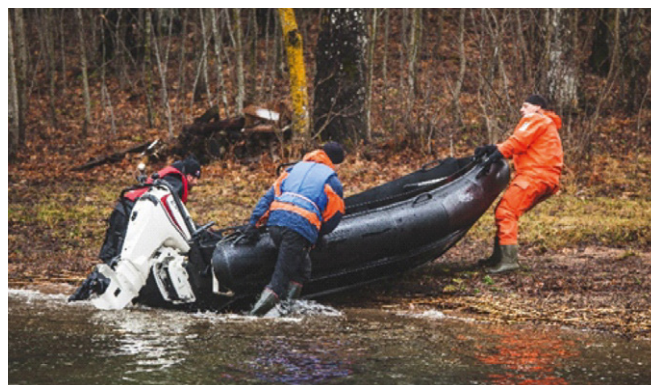

This small boat originally intended for 3 people. In the CE certification test, however, we found that the boat can carry 6-7 people. The boat is really stable and safe.

The hull is divided into 3 watertight sections and additionally can be filled with flotation bags. A fully loaded boat would not sink even if shot by a rifle. HMW Polyethylene is the best material for sturdy workboats that have to endure rough treatment. There is a PE500 protection sheet wrapped around the keel so that the boat can easily be dragged on the ground or on the winter ice.

The Arctic 4 is intended as a quick deployment vehicle to assist in sea rescue, oil recovery or as a daughter boat on bigger vessels. The light weight of the boat makes it easy to launch anyplace. A launch ramp is not needed because 4 people can carry the empty boat. Despite its low weight, the boat is rigid and durable.

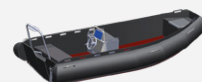

Equipment
